

TABLE OF CONTENTS

Introduction	i
Symbols	v
Chapter 1:	
Introduction to the Dynamical Behaviour of Rotors.....	1
1.1: General Considerations.....	1
1.2: The Linear Jeffcott Rotor.....	3
1.3: Viscous Damping.....	6
1.4: The Jeffcott Rotor with Viscous Damping.....	6
1.5: Structural Damping.....	9
1.6: Accelerating Jeffcott Rotor.....	11
1.7: Coupled Rotors.....	14
1.8: Whirl Motion and Stabilizing Force.....	20
1.9: Energy Dissipation in Whirl Motion.....	21
1.10: Isotropic Jeffcott Rotor on Non-Isotropic Supports.....	22
1.11: Non-Isotropic Jeffcott Rotor. Natural Frequencies.....	25
1.12: Conclusions.....	29
Chapter 2:	
The GGG- “GG (Galileo Galilei) on the Ground” Differential Accelerometer for testing the Equivalence Principle. Overview of the Experiment.....	32
2.1: Introduction.....	32
2.2: Basic Concepts of the GGG Mechanical Design.....	33
2.3: How it works	36
2.4: The Signal of an Equivalence Principle Violation.....	38
2.5: The Read-Out System.....	40
2.6: Whirl Control.....	44
2.7: Adjustments and Settings.....	46
2.8: Low Frequency Seismic Noise.....	48
Chapter 3:	
Mathematical Model of the GGG System.....	51
3.1: Introduction.....	51
3.2: Generalised Coordinates and the GGG Mathematical Model.....	51

3.3: The Lagrangean of the System in the Rotating Reference Frame.	54
3.4: Equilibrium Positions and 2-nd Order Expansion of the Lagrangean.	55
3.5: Linearized Equations of Motion.	55
3.6: Equations of Motion in State-Variable Form.....	58
3.7: Rotating and Non-Rotating Damping.	59
3.8: Numerical Simulation of the GGG System	59
3.9: Normal Modes as Derived from the Numerical Simulation.	60
3.9.a: Comparison with the Experiment.	61
3.9.b: The Role of Damping.	62
3.9.c: The Low-Frequency Limit.	62
3.9.d: Normal Modes as Functions of the Spin Frequency.....	63
3.9.e: Instability Regions.	64
3.9.f: GGG Frequency Response	65
3.10: Approximated Formulae for Deriving the Normal Modes.	66
3.11: Concluding Remarks.....	68

Chapter 4:

Dynamical Response of the GGG Differential Accelerometer.....	70
4.1: Introduction.	70
4.2: External Forces and Computation of the Transfer Function.	70
4.3: The C Matrix.	71
4.4: The B Matrix.	74
4.5: The Transfer Function in the Non-Rotating Reference Frame.....	76
4.6: The Common Mode Rejection Factor.....	77
4.7: Analytical Solution at Zero Spin.....	78
4.8: Low and High Spin Frequency Regime.....	80
4.8.a: The Period of Natural Differential Oscillations.....	80
4.8.b: Relative Displacements as Function of Frequency of the External Force	80
4.8.c: Common Mode Rejection of Low Frequency Forces	83
4.9: Intermediate Spin Frequency Regime.....	85
4.10: Enhanced Common Mode Rejection	87
4.11: Moments of Inertia and Self-Centring of Rotors	87
4.12: Self-Centring in the GGG System	91
4.13: Concluding Remarks.....	93

Chapter 5:

Experimental Results on Whirl Motion and Quality factor.	96
5.1: Introduction.	96
5.2: The Measurement Data.	96
5.3: Theoretical Model of the Whirl Motion.....	97
5.4: Backward and Forward Whirls in the Experiment.	100

5.5: Best Fit of the Whirl Motion.....	105
5.6: General Considerations on the Quality Factor of the GGG System..	108
5.7: Q Measurements at Zero Spin.....	109
Chapter 6:	
Active Linear Control of the Whirl Motions.	115
6.1: Introduction.	115
6.2 The B Matrix.	115
6.3 Whirl Damping and Simulation of the Control Scheme.....	117
6.4 Experimental Results	123
Chapter 7:	
Active Reduction of Seismic Noise.	127
7.1: Measured Environmental Disturbances.	127
7.2: Open Loop Scheme of the System.....	128
7.3: Proportional-Integral Control of Seismic Noise	131
7.3.a: The Transfer Functions	133
7.3.b: Preliminary Experimental Results.	135
Chapter 8:	
The GGG Experiment- Concluding Remarks and Perspectives.....	137
Chapter 9:	
The GG Space Experiment.....	141
9.1: Introduction.	141
9.2: The GG Experiment Concept.....	142
9.3: The Spacecraft and the Orbit.	146
9.4: Requirements and Error Budget.....	149
9.5: The Mathematical Model.	152
9.6: General Solution of the Equations of Motion.	155
9.7: Dynamical Evolution in the Rotating Frame.	158
9.8: Non Rotating Damping and Whirling Stabilisation.....	159
9.9: Reconstruction of the Whirl Motion.	162
9.9.a Reconstructiong of the Relative Displacement.	164
9.9.b: Reconstruction of the Relative Velocity.....	167
9.10: THE Control Force.	167
9.11: Results of the Numerical Simulations and Conclusions.....	170
9.12: Tidal Effects on the GG Test Masses.	172

9.12.a: EP Violation Signal and Tidal Effects for Test Masses Coupled in the Orbit Plane	173
9.12.b: Tidal Effects in Supercritical Rotation.	175
9.12.c: The GG Experiment: EP Violation Signal, Whirl Motion and Tidal Effects in the Sensitive Plane.	175
9.12.d: The GG Experiment: Tides Due to Relative Displacements Along the Spin Axis.	179
Appendix 3.A: The Lagrangean of a Rotor.	181
Appendix 4.A: Transfer Function in the non-Rotating Frame.....	187
Appendix 4.B: Self-Centring.	190
Appendix 5.A: Data Analysis in the Rotating Frame: Fourier Filter.	192
Appendix 5.B: The σ_+ and σ_- Functions.....	196
Appendix 8.A: The GGG Electronic Circuits.....	199
Appendix 9.A: The PGB Passive Noise Attenuator in the GG Space Experiment	216
Appendix 9.B: A PGB-like Passive/Active Noise Attenuator on the Space Station.	222
9.B.1: Mechanical Suspensions.....	223
9.B.2: Goal and Requirements of the Active Control.....	229
9.B.3: Derivation of the Transfer Function.....	231
9.B.4: Thermal Analysis.	235
Appendix 9.C: Numerical Simulation of the GG Dynamical System.....	242
9.C.1: Eigenvalues of the GG System in the Inertial Frame.....	242
9.C.2: Whirl Motion in the Rotating Frame.....	245
9.C.3: Whirl Stabilization: The Ideal Case.	248
9.C.4: Whirl Stabilization with Realist Errors.	250
